# HansenMillennium®

**HansenMillennium®** offers unique window and door solutions with industry leading slim profiles for any type of building. With the slim profiles, maximum light and energy influx is achieved.

The system combines classic architecture with modern features, and the minimalist expression with narrow frames ensures maximum utilization of daylight in the building.

This is the window system that everyone falls in love with at first sight!

A.C. Bangs House, Denmark

Holiday House, Denmark

Lokomotivværkstedet, Denmark

Whitfield Street, UK

# Villa Gulliksson Sweden

Modernist villa with sleek lines featuring sliding tilt doors with unique slim profiles that optimize the glass and provide maximum natural light.

The doors can be positioned in three ways: open, closed, and tilt. When in the open position, the entire door is hidden behind the fixed panel next to the doorway, eliminating any obstructive door leaf in the room.

A handle with all three functions makes operating the doors effortless. Even very large doors are easily and quickly opened using the concealed fitting.

Windows & Doors

# Hotel NH Collection Denmark

Renovation of an office building from 1961 designed by Palle Suenson. The building was once called the "Desert Fortress" because of its closed facades.

In connection with the renovation, transparent solutions have been chosen, which provide a lighter and slimmer expression. The facades have been opened up towards the surroundings with the help of an extension with large glass partitions. The extension allows passers-by to see the life inside the building, and towards the waterfront, the large glass partitions contribute to opening the building towards the harbor.

Windows & Doors

# Hotel Noble House Sweden

The Hotel Noble House was named after James Clavell's bestselling novel from 1982 (the hotel opened in 1986) set in 1960s Hong Kong. The founders of the hotel wanted it to have the same luxurious feel as the fine hotels in Hong Kong.

After renovation, the hotel no longer focuses on Hong Kong, but all environments draw inspiration from movies and books.

**Hansen**Millennium glass partitions have been delivered for the project, which are adaptable and despite significant variation in the different environments, fit equally well in each room. Overall, **Hansen**Millennium contributes to the delightful atmosphere that permeates the hotel.

# Renovation of Private Villa Denmark

This renovation project involved carefully preserving the original architecture of the building while enhancing its functionality and aesthetic appeal.

One of the key features of the renovation was the installation of beautiful mullioned windows, which not only add a touch of timeless elegance to the facade, but also allow plenty of natural light to flood the interior spaces.

In addition to the windows, we also installed new doors and patio doors that perfectly complement the original design of the building.

To ensure that every detail was perfect, we added beautiful brass handles to the interior of the doors.

Windows & Doors

# Stratford Waterfront London, UK

At East Bank, you'll find the UK's newest and most exciting Cultural Quarter situated right in the heart of Queen Elizabeth Olympic Park.

This cutting-edge destination is the new London College of Fashion campus, a hub for innovation, creativity, and learning created thanks to a collaboration between top universities, arts and culture organizations, offering opportunities to all in east London.

East Bank boasts an impressive feature that elevates the experience to a whole new level.

The project is fitted with slimline **Hansen** Millennium windows, providing optimal sightlines and an incredible view.

# Window design with respect for the past

In the early 20th century, windows and facades were often made with narrow steel profiles, and this architecture can still be found in many parts of Northern Europe.

As architecture evolves and standards improve with technological advancements, there is a demand for better windows and doors. Old steel windows lack insulation, causing significant energy loss and condensation buildup.

Järnvråkstäderna, Sweden

With respect for the past and existing architecture, **HansenGroup** has developed a profile system that not only maintains the narrow profiles and maximizes natural light but also meets the strictest demands of energy performances.

The profile design has been developed in close collaboration with leading architects, respecting the past and maintaining a consistent aesthetic appeal for the entire system.

Centralværkstederne, Denmark

Berångshuset, Sweden

HansenMillennium windows can be constructed in any shape, such as rectangular, triangular, round or with arches. This makes them particularly suitable for renovating older buildings without compromising the original architecture.

Cleveland Street, UK

Hotel Ottilia, Denmark

# Barnängshuset Sweden

The Barnängshuset building was constructed as early as 1917. For the first 30 years, it housed a cotton factory before it was taken over by printing and publishing companies. At one point, more than 1000 factory workers were employed here.

Preserving the building's character and style was of utmost importance.

**Hansen** Millennium was perfect for this. The profile system can be integrated into the existing facade, and the appearance can imitate the existing windows/glass panels. With the new glass facades in place, the character of the building and the surrounding area was respected, but now with modern units with excellent energy performance

# A House with a View Denmark

This house is located on the former site of the lifeboat house.

The slim window profiles provide maximum view and natural light.

The owners can enjoy breathtaking views with our slimline windows and terrace doors that let in plenty of natural light to brighten up the interior.

**Hansen** Millennium windows are designed to give you unobstructed views of the surrounding scenery, allowing you to take in the beauty of your surroundings from the comfort of your home.

# Smådalarö Gård Sweden

Smådalarö Gård - one of Swedens largest spa hotels - is located only 50 minutes away from Stockholm.

After extensive renovations and a 2000 sqm extension the complex now boasts a gym, 56 new hotel rooms, spa, and relaxation rooms.

The large Millennium glass partitions create a lovely manor environment where the transition between building and nature is seamless.

The design and colors inside reflect the archipelago nature outside, creating a feeling of being outdoors while indoors. The extension is well thought out, creating an exclusive and luxurious yet present feeling.

Windows & Doors

# Kværnerdammen Townhouses Norway

Turbinveien in Kværnerbyen was known for its turbine production, which took place all over the area.

In Kværnerdammen, AF Gruppen has built 89 apartments and 7 town houses in the old industrial area and the new Oslo district Kværnerbyen.

Although the majority of the project is newly built, an outer wall from the old factory premises for "Kværner Brug" has been restored and reused in the series of modern townhouses.

The windows in the old facade have been designed to be reminiscent of the old factory windows which were made in cast iron.
